

WEBDH1002: Web and UI Design

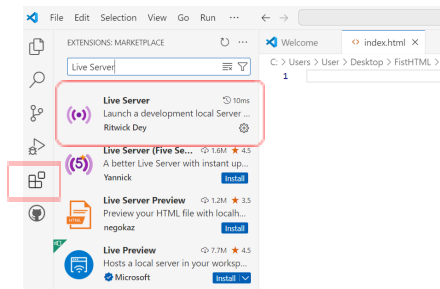

Install Visual Studio Code (VS Code)

Instructions:

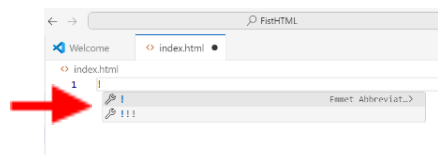

1. Download VS code here: <https://code.visualstudio.com/Download>

2. Install the VSCodeUserSetup file.
3. Create a folder named **"Test"** on your desktop.
4. Open VS Code, select **"Open Folder"**, and choose the Test folder.
5. Click **"New File"**, name it **index.html**, and save it inside the Test folder.
6. Click on the Extensions menu in VS Code, search for "Live Server", and install it.

7. Type **!** in the editor, then press Enter or Tab.

8. In the index.html editor, type the following code inside the <body> section:

```
<h1>Hello, World!</h1>
```

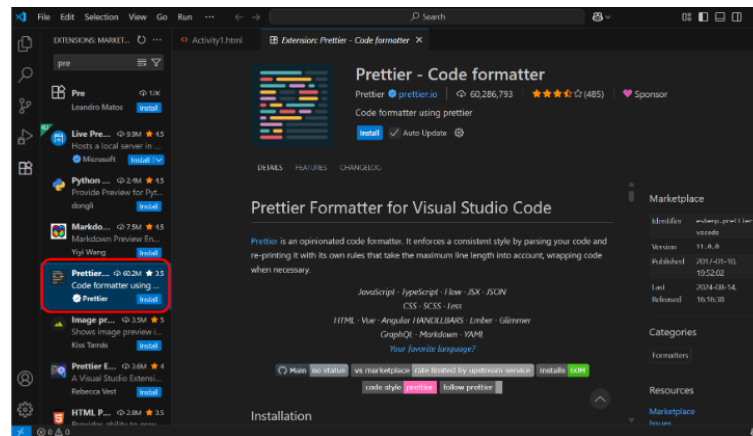

```
<p>This is my first homepage.</p>
```

9. Save the file, press Ctrl + S (Windows) or Cmd + S (Mac)

10. Click Go Live on the bottom right menu to display your HTML file in the browser.

11. You may also install the Prettier – Code Formatter extension in VS Code to automatically format your code. *(I recommend installing this extension on your lab machine too.)*

Then, set Prettier as the Default Formatter

- Open the Command Palette (Ctrl+Shift+P / Cmd+Shift+P).
- Type "Format Document With" → select "Configure Default Formatter..."
- Choose "Prettier – Code Formatter".

Note: Prettier does not automatically format your code as you write. To apply Prettier, right-click in the editor and select Format Document, or use the keyboard shortcut Shift + Alt + F on Windows/Linux or Shift + Option + F on macOS.

You can also watch the VS Code installation guide here (log in with your TUD account):

Have fun coding!
